

Böttcherin Aqualux

Water Additive for Automatic Cleaning Systems

Uses

Böttcherin Aqualux is added to the water tanks in the automatic roller and blanket wash systems in sheetfed presses. It can also be premixed with water for washing with a cloth by hand.

Characteristics

- speeds final cleaning in wash system
- prevents calcium residues in the water basin
- reduces surface tension of the cleaning water resulting in a more even spread on blankets and rollers
- leaves less dirt and water around blanket gaps
- helps keep wash-up drip trays and return lines clean
- keeps the nozzles of blanket and roller wash-up devices clean, minimizes maintenance time

- removes remaining ink and solvent residues from rollers at the end of wash-up cycles
- improves flow across wash-up blades
- on cloth type blanket wash systems, dissolves dirt into the cloth much quicker
- results in a good clean surface on blankets and rollers

Application

Böttcherin Aqualux is added to the water at a concentration of 5% by volume (6.5 ounces per gallon). Böttcherin Aqualux must be kept free from freezing when in storage.

May not be used with filtration recycling systems.

Protect from freezing when storing.
