

Böttcher Ceramic Roller Cleaner

Ceramic Dampening Roller Cleaner

Uses

Cleans ceramic dampening rollers. Penetrates into the micropores and is self-acting to loosen and dissolve ink residue.

Application

Directions For Use: Blankets: Utilizing a soft cotton cloth, apply Böttcher Ceramic Roller Cleaner over the entire surface area of the ceramic dampening roller. Can also be sprayed onto the roller. Allow to penetrate and work for a few minutes. Keep the surface area wet during the work period by occasionally spraying a light mist over the roller. After the work period, take off the soiling from the roller with a clean cloth. Thoroughly flush the rollers with water after the cleaning cycle. If a long period of press downtime is expected, it is recommended to protect the cleaned ceramic rollers with gum arabic. After the water flush, completely dry the rollers and then coat with a gum arabic preservative. Allow the gum arabic to completely dry before restarting the dampening system with fountain solution.

Characteristics

- Self-acting
- Loosens and resolves ink residue
