

BöttcherPro Calcit

Water Rehardener

Uses

BöttcherPro Calcit is a water rehardener use to standardize and reduce the corrosiveness of reverse osmosis, de-ionized, distilled or soft water

Characteristics

- for water from all reverse osmosis, deionization, or distillation units
- use with any soft water (0-4 dH total hardness)
- dosage, 0.5%
- constant water hardness of 10 dH (total hardness)
- will not alter pH
- stabilizes ink/water balance

Application

BöttcherPro Calcit is added to the reverse osmosis water or to the soft water feed lines to the circulation system by the use of automatic dosage pumps. BöttcherPro Calcit works well with all BöttcherFount products.

More details are available in the technical information sheet "Use of water re-hardener BöttcherPro Calcit" at www.boettcher-systems.com.

After adding BöttcherPro Calcit to the tap water the conductivity can be determined using a conductivity meter.

Marking

BöttcherPro Calcit is classified and marked in accordance with EC-Directive 1999/45/EC - in its latest version. BöttcherPro Calcit is not a dangerous good in the sense of national and international transport regulations.
